RSC Web-enables Rev-Trac Change Control Solution with Launch of xPack Add-on

xPack add-on for Rev-Trac improves accessibility, simplifies integration with other applications and provides new insight into key performance measures

Orlando – May 16, 2006 – Revelation Software Concepts Pty Ltd (RSC), member of the SAP® Software Partner program and creator of Rev-Trac®, the market leading change control application for SAP solutions, today announced at SAPHIRE® '06 Orlando the availability of its xPack add-on for Rev-Trac. The new xPack module web-enables Rev-Trac to allow users to display or approve change requests remotely and makes it easier to integrate Rev-Trac with applications such as help desks or other change management systems using web services. The xPack also provides interactive, browser-based reporting against Rev-Trac data, giving stakeholders a better insight into change metrics and possible bottlenecks in change management processes through dashboards and interactive reports.

Users of the xPack will be able to create, display, modify and approve change requests via a web browser - a boon for organizations where people required to approve changes may find it inconvenient to logon directly to the development system where Rev-Trac is normally located. In addition, xPack users will be able to approve change requests instantly via PDAs, phones or other web-enabled devices – a great time-saver for senior managers, in particular.

Organizations using the xPack will be able to integrate Rev-Trac bidirectionally with other applications via web-services or a new API, giving users both read and update access to changes under Rev-Trac control without leaving their help desk or other generic change management application.

Browser-based dashboard and drilldown reports supplied with the xPack will help managers and other participants in the change process answer questions such as "How am I personally doing on my own key performance indicators?" and "Where are the greatest bottlenecks in our change process?"

"With the xPack, RSC is again responding to meet the needs of companies working in more challenging environments," said David Drake, RSC's CEO. "All of our customers depend on SAP solutions, but they often depend on other applications as well. They need change control solutions that integrate across the board – and of course they also want the quality improvements, greater accessibility and cost savings that web integration can provide. That's what we're delivering with the xPack."

Today's announcement was made at SAPHIRE '06 Orlando, SAP's international customer conference. More information on RSC's Rev-Trac and its new xPack add-on module, including screen shots of the xPack in use, are available at http://www.xrsc.com/rev_xPack.html.

About Revelation Software Concepts

Headquartered in Melbourne, Australia, Revelation Software Concepts Pty Ltd has earned the trust of some of the world's largest corporations since 1997, developing robust software applications that help customers obtain maximum competitive advantage from their SAP solutions. An SAP Software Partner, RSC's business strategy is 100% SAP solution-focused. RSC's change control tool Rev-Trac® and cross-application reporting product xReports® demonstrate the company's preparedness to think 'outside the box' when developing superior software solutions. Technologically innovative, both products reflect RSC's commitment to creating solutions that are simple to use and promote business transparency and collaboration. Rev-Trac 5.0 has achieved ABAP™ certification for SAP Basis Release 4.6 and additionally "Powered by SAP NetWeaver®" status for SAP NetWeaver Application Server 6.20.
