Revelation Software Concepts to Integrate IntelliCorp LiveCompare Into Rev-Trac Change Control

*Product integration to improve SAP® ALM and change management, saving customers
time, money and resources*

Melbourne, Australia – Aug. 10, 2009 - Revelation Software Concepts Pty Ltd (RSC), an SAP® software partner, today announced it would partner with IntelliCorp®, a worldwide provider of ALM, business process management and data management solutions for SAP customers and partners, to create an integration between RSC's powerful Rev-Trac® change control solution and IntelliCorp's LiveCompare™ intelligent impact analysis solution for SAP software-based systems. The resulting integration will allow SAP software customers to reduce their system ALM costs, risks and resources by incorporating combined market-leading, comprehensive change control and impact analysis into their IT practices.

IntelliCorp's ALM and impact analysis solutions are used by 35% of *Fortune* 500 that run SAP, while RSC's Rev-Trac solution is the market-leading third-party SAP change control add-on. Both products are certified by SAP as integrated SAP software add-ons and both support the Enhanced Change and Transport System (CTS+) of the SAP NetWeaver® Application Server (SAP NetWeaver AS) in single or mixed-stack, single or multiple-landscape environments.

"Combining Rev-Trac's powerful change control process automation and enforcement with LiveCompare's intelligent impact analysis enables SAP customers to further automate and improve ALM, while reducing SAP TCO and maximizing SAP's value," said Christopher Trueman, CTO of IntelliCorp. "This natural fit extends an SAP customer's ability to manage system changes, and transitions, smoothly and safely, especially changes that involve complex configurations of mixed Java, ABAP or mixed ABAP/Java-based, or other non-ABAP components."

"It was clear that leveraging our product strengths would allow RSC and IntelliCorp to deliver immediate and significant benefits to any large organization," added David Drake, CEO and CTO of RSC. "In particular, organizations dealing with issues involving mixed-stack, mutli-platform, multiple landscape, or other complex business information configurations running on SAP software-based systems will quickly

realize significant benefits including fewer disruptions and increased savings in time, money and resources.”

A key Rev-Trac benefit is its ability to track change transports against their associated business issues. Integrating LiveCompare’s intelligent impact analysis functionality into the change process will reveal the system-wide effects of changes intended to resolve business issues. IT teams will be able to clarify and fully understand all impacts on affected modules and transactions, so they can identify and eliminate risks of system disruptions before importing a change into the production environment.

Both RSC Rev-Trac and IntelliCorp LiveCompare have won the maximum 5-Star rating from SAP software users at SAP EcoHub (<http://www.sap.com/ecosystem/partners/index.epx>), the SAP solution marketplace where customers go to discover, evaluate and purchase partner solutions. A 5-Star rating by in-the-field third-party customers reflects an extremely high level of user satisfaction and solution reliability. SAP EcoHub users are among the most technically experienced IT team members anywhere.
