Rev-Trac by Revelation Software Concepts Provides Automatic Mixed Platform Capabilities in Support of CTS+

Unmatched for use with large SAP® application-based infrastructures – gives full transport control for mixed Java, ABAP™-based systems utilizing SAP NetWeaver® AS

Melbourne, Australia – May 14, 2008 – Revelation Software Concepts Pty Ltd (RSC), an SAP® software partner, today announced that its Rev-Trac® change control technology for use with SAP application-based infrastructures now fully supports the Enhanced Change and Transport System (CTS+) of the SAP NetWeaver® Application Server (SAP NetWeaver AS) for enabled transports in mixed Java and ABAP™/4-based stack environments.

SAP's introduction of CTS+ in SAP NetWeaver AS provides change teams with a single method to manage all change packages for SAP solutions, based on both ABAP and non-ABAP, via the one deployment system. Rev-Trac extends the value of CTS+ by providing additional change control mechanisms that make change management easier, automate the use of mixed-stack transports and eliminate problems associated with synchronous deployment.

Rev-Trac's additional cross-application capabilities can ensure that the entire change and transport management process, regardless of technology stack, can now be managed from one place with minimal manual intervention. Companies can immediately deploy dual-stack or single-stack Java, ABAP or mixed Java-based transports to any combination of destinations.

"Companies running SAP applications increasingly need to tie together changes from both ABAP and Java environments and incorporate non-ABAP files, such as those used with SAP NetWeaver Portal, SAP NetWeaver Exchange Infrastructure and J2EE elements," said Rick Porter, RSC vice president of business development. "Rev-Trac's robust change control process management and enforcement makes the increased complexity of mixed technology stack change and transport management so much easier."

To manage ABAP-based transports together with non-ABAP-based transports, Rev-Trac treats the independent transports as a single bundled task. This helps ensure satisfaction of critical dependencies between, for example, changes made in Java to SAP NetWeaver Portal and 'back end' ABAP-based changes in the SAP ERP application. Treating separate but related changes as a single, synchronized "unit" of work, regardless of technology stack source, means that objects changed many times in development are imported as transports only once, together with fully automated authorizations and compliance documentation. They are never deployed out of sequence or with unmet dependencies, so companies save overhead time and eliminate their exposure to various potentially costly errors.

The Rev-Trac solution can help ensure that all packages, whether based on Java or ABAP, are managed seamlessly without losing the ability to make iterative changes to either stack independently. Single- or dual-stack Java changes are then imported and deployed together via the standard Transport Management System or TMS.

About Revelation Software Concepts

Headquartered in Melbourne, Australia, Revelation Software Concepts (RSC) has earned the trust of some of the world's largest corporations since 1997 with its change control technology for use with SAP solutions, Rev-Trac. RSC's business strategy is 100% focused on reducing the risks and lowering the costs associated with managing changes to SAP solutions. The ongoing evolution and extension of Rev-Trac as a web-enabled application and the extension of change control to include support for SAP non-ABAP technologies demonstrate the company's commitment to creating solutions that are technologically superior, simple to use and achieve their objectives for customers. Revelation Software Concepts is an SAP software partner. Rev-Trac 5 has achieved "Powered by SAP NetWeaver". For more information, visit <http://www.xrsc.com>.
