## Revelation Software Concepts, Panaya Ink Deal to Integrate Automated Impact Analysis in Change Control

*Integration will provide unprecedented system visibility to IT departments for configuration and change control enforcement on SAP® solution-based systems*

**Orlando, Florida, May 5, 2008** – Revelation Software Concepts Pty Ltd (RSC), an SAP® software partner, and Panaya Ltd., a provider of on-demand impact and upgrade analysis for use with SAP solutions, today announced they will integrate the capabilities of their two flagship products. The combination will allow each to leverage the strengths of the other, providing powerful and unprecedented levels of visibility and control to IT departments running large SAP solution-enabled systems.

Both RSC and Panaya have achieved and maintain SAP certified integration status for their respective products – Rev-Trac® 5.0 and Panaya 1.0.

The integration between RSC and Panaya solutions will, for the first time, eliminate unpredicted system impacts from changes made to a system running SAP solutions. Panaya's unmatched system visibility will become an integrated part of the automated and enforced change control process provided by RSC's Rev-Trac change control technology.

One of Rev-Trac's key benefits is how it tracks the relationship of transports to their associated business issues. Enforcing impact analysis as part of the change process will produce a full understanding of the effects of changes made to resolve business issues. Before change requests are released, the user can review and approve the impact analysis, using its clarification of all affected modules and transactions to identify and eliminate risks of harmful business disruptions.

Panaya will continue to be available and fully supported as a stand-alone product but with Rev-Trac and Panaya, RSC customers who wish to eliminate unforeseen side effects and reduce cost through impact analysis will have a ready-made solution. The Panaya impact analysis solution is a Web-hosted application offered as an on-demand solution through its Software-as-a-Service (SaaS) architecture. The integration with Rev-Trac will make impact analysis a seamless part of the change control process and ensure that configuration teams automatically carry out the analysis at the appropriate stage.

"We are delighted to work with RSC to bring combined capabilities to IT solution teams and to systems integrators using SAP solutions," said Yossi Cohen, founder and CEO of Panaya. "RSC's change control technology has become an essential aspect of the IT environment for many large customers, and leveraging our two technologies will give our customers the ability to analyze the impact of configuration changes efficiently, using enforced change control to target proposed changes very precisely within even the largest systems. The combination will accelerate time to completion and reduce the cost of implementing, maintaining and upgrading SAP solution-based systems."

(more)

“At RSC, we watched Panaya advance its technology steadily over the past couple of years and quickly realized our two companies could make available an unprecedented integration of impact analysis and end-to-end change control in SAP solution-based systems,” said David Drake, president of RSC. “We are very excited about this opportunity to work with Panaya to create that rare achievement, a truly synergistic combination of powerful technologies to the benefit of customers of both of our companies.”

The combined technologies will maximize benefits for Panaya customers while adding important new capabilities to the Rev-Trac change control process. Together, they will provide a single solution that enforces any combination of change request, approval, and migration processes, with the ability to enforce an impact analysis on any customized system change.

Today's announcement was made at the SAPHIRE® 2008 Orlando conference, SAP's premier business technology event being held May 4-7 in Orlando. More on Revelation Software Concepts and its products, including Rev-Trac 5, can be found at <http://www.xrsc.com/Rev-Trac.html> and at SAPHIRE, Booth 778.

#### **About Panaya, Ltd.**

Panaya's on-demand impact analysis solution identifies the impact of customization changes to functional behavior of SAP solution-based systems by automated analysis of SAP code and configuration. Panaya enables an in-depth cross-application overview of systems and thus enhances SAP solution-based system comprehension. Its Panaya 1.0 technology has been tested and certified by the SAP Integration and Certification Center. Panaya's on-demand architecture provides customers with practically zero time-to-value, clear and controllable ROI, a cash-flow friendly subscription payment model, and has no overhead on IT resources.

#### **About Revelation Software Concepts**

Headquartered in Melbourne, Australia, Revelation Software Concepts (RSC) has earned the trust of some of the world's largest corporations since 1997 with its change control technology for use with SAP solutions, Rev-Trac. RSC's business strategy is 100% focused on reducing the risks and lowering the costs associated with managing changes to SAP solutions. The ongoing evolution and extension of Rev-Trac as a web-enabled application and the extension of change control to include support for SAP non-ABAP™ technologies demonstrate the company's commitment to creating solutions that are technologically superior, simple to use and achieve their objectives for customers. Revelation Software Concepts is an SAP software partner. Rev-Trac 5 has achieved “Powered by SAP NetWeaver” status. For more information, visit <http://www.xrsc.com>.
